

SALMONELLA (PARATYPHOID) QUICK TEST

This rapid test detects **Salmonella** bacteria in the faeces of either single birds or on a pooled sample of the loft.

- Using one test kit a pooled faecal sample from the loft detects the Salmonella status of the loft in general.
- Pigeons can also be tested individually to detect general health and carrier status of individual pigeons.
- Results are available within 10 minutes.
- Easy to follow instructions allow the fancier to do the test himself.
- Treatment, if needed can be started immediately. No time is wasted waiting for laboratory results.
- Any new birds introduced can be tested before being introduced into the breeding program.
- Cost effective. Single test kit or a box of 20 kits can be supplied.
